

CEWOOD Acoustic Panels achieve Cradle to Cradle Certified® Bronze certification

CEWOOD is a responsible and future-oriented business. The natural quality of the panels that it produces is one of the company's principal aims. This is why it intensively focuses on the manufacturing process, sourcing of raw materials and the life cycle of its products. As CEWOOD continues achieving the set goals, the business has been awarded the "Cradle to Cradle Certified®" Bronze certification for the Acoustic Panel range.

The product standard "Cradle to Cradle Certified®" means that the company's products have been assessed in five categories: safety of materials, reuse of materials, consumption of renewable energy and carbon, water control and social responsibility. CEWOOD has successfully completed this rigorous certification procedure and has been awarded a Bronze Level certificate.

"Cradle to Cradle®" aims to replace the linear "cradle to grave" production principle —, where materials are often wasted without long-term preservation of natural resources, — with a "cradle to cradle" production principle where all cycles are based on sustainability and responsibility towards the environment, safe use of products and the possibility to recover them for high-quality reuse at the end of their life cycle.

"CEWOOD panels are not merely products; the focus is on people, their needs and their responsibility to the world in which we live and in which our children will live. We are aware of our responsibility towards nature and sustainability of materials, so we have adapted our entire production cycle with this in mind. It is important to us how the panels are produced and what happens to them throughout their life cycle," claims Ingars Ūdris, CEWOOD Board Member.

CEWOOD is a Latvian company with a factory in Jaunlaicene, which produces wood shavings panels widely used around the globe. The panels are particularly suitable for finishing of ceilings and walls, offering several advantages: 100% natural origin, effective noise absorption, improved acoustic comfort and indoor climate. It is a cost-effective solution of ceiling and wall finishing, quick and easy to mount, and durable. The company pays a lot of attention to ensure that the panels contain only 100% natural, high-quality components that are sourced in an environmentally friendly way and that are manufactured with utmost respect for resources. The panels are made of certified timber using green energy. The panels have received all major certifications, including "Cradle to Cradle Certified®" as of recently.

Cradle to Cradle Certified® is a registered trademark of the Cradle to Cradle Products Innovation Institute.
